

Michael Brandmeyer

michaelbrandmeyer99@gmail.com | (760) 410-8002 | michaelbrandmeyer.com | github.com/bmichael99

Education

California State University, San Marcos – Bachelor's in Computer Science

Aug 2024

- 3.4/4.0 GPA | 4.0/4.0 GPA over the final 2.5 years.

Experience

Software Engineer | Contracted, Adanta – Remote

Aug 2025 – Present

- Led the end to end development of a backend service integrating SharePoint and Azure ML to transform thousands of unstructured financial documents into structured SQL records, reducing manual data entry by 8+ hours per week.
- Built RESTful APIs (Node.js, Express) to serve processed financial data to a React frontend and AI chatbot, enabling stakeholders to query invoice records, analyze metrics, and generate reports from structured relational data.
- Collaborated cross-functionally with finance stakeholders to translate business requirements into technical solutions, presenting architectural decisions and measurable outcomes in recurring reviews.
- Designed a data verification layer that displayed extracted data alongside source documents with confidence scores, ensuring data accuracy and reliability before persistence to PostgreSQL.

Projects

Finance Analytics Website

finance.michaelbrandmeyer.com

- Built a full-stack web application and REST API (TypeScript, React, Express, PostgreSQL) that processes user-uploaded financial documents and surfaces extracted data through interactive dashboards.
- Designed a scalable event-driven job queue using Redis, BullMQ, and AWS S3 to orchestrate asynchronous document ingestion and processing, isolating compute-heavy workloads from API request handling.
- Implemented a Redis-based producer-consumer messaging system with server-sent events (SSE) to stream real-time processing status updates to users, improving system transparency and user experience.
- Containerized the application with multi-stage Docker builds and deployed to a Linux VPS with a GitHub Actions CI/CD pipeline, ensuring consistent and reliable production releases.
- Implemented secure authentication using JWT access/refresh token flows and Google Identity SSO with HTTP-only cookies to protect sensitive data and mitigate cross-site scripting risks.

Google Drive Clone

files.michaelbrandmeyer.com

- Built and deployed a full-stack file-sharing application with RESTful CRUD APIs (Express.js) that allows users to upload, manage, and share files via customizable expiring access links, integrating PostgreSQL for metadata storage and Supabase Storage for secure cloud-based file management.
- Implemented authentication and session management using Passport.js and designed a server-rendered frontend with responsive UI (HTML, CSS, EJS) to deliver a performant user experience.

Class Scheduling Assistant

github.com/bmichael99/Top-Class

- Engineered a RESTful MVC backend using Java and Spring Boot to serve professor ratings and reviews to a React frontend, enabling students to make informed class selections without manual research.
- Developed a Python/Flask web scraper API to extract and serve structured professor data from RateMyProfessor, demonstrating experience building and integrating multiple backend services.

Skills

Languages: Java, TypeScript, JavaScript, Python, C++, SQL, HTML, CSS

Frameworks & Libraries: Spring Boot, Node.js, Express, React, TailwindCSS

Databases & Messaging: PostgreSQL, MongoDB, Oracle SQL, Redis, BullMQ (event-driven job queues)

Infrastructure & Tools: AWS S3, Docker, Git, GitHub Actions (CI/CD), Linux, Azure AI Foundry
